18. (Original) A method for remotely controlling a computer, the method comprising:

displaying output from the computer on a remotely located screen;  
encoding keyboard information by modulating one or more optical pointer features;

projecting the encoded keyboard information on the remotely located screen;  
capturing a plurality of image frames including at least a portion of the remotely located screen;

processing image frames to detect and decode the encoded keyboard information transmitted by the optical pointer; and

generating a command to control the computer based on the decoded information.

19. (Original) The method of claim 18 further comprising:  
encoding voice information by modulating one or more optical pointer features.

20. (Original) The method of claim 18 wherein the step of processing comprises detecting a change in orientation of the optical pointer.

21. (Original) The method of claim 18 wherein the step of processing comprises detecting a pattern of movement, a change in orientation, or a change in size of the

optical pointer, and wherein the step of generating a command comprises generating a sequence of commands.

22. (Original) The method of claim 18 wherein the step of processing comprises detecting a pattern of movement of the optical pointer.

23. (Original) The method of claim 22 wherein detecting a pattern of movement comprises detecting a change in size of an optical pointer feature.

24. (Original) The method of claim 23 wherein detecting a pattern of movement comprises detecting an increased size of an optical pointer feature and wherein the step of generating a command comprises generating a zoom command for the computer.

25. (Original) The method of claim 22 wherein the step of generating comprises generating a scroll command for the computer.
